

# Successful Soil Management

This Successful Soil Management workshop is designed to provide you with an opportunity to discuss options for soil management to get the best from your autumn pastures or crops, including remediation of potential issues.

The Agronomy Network is pleased to host this session and invites all agronomists, farmers and others interested to attend to discuss soil constraints including strategies to manage the use of ground water.

Soil scientist, Christian Bannan, will use soil pits, in conjunction with soil tests, to see what goes on beneath the surface and provide the basis for discussions around management options.

With host farmer, Jared McNair, Christian will talk through the paddock history and options for preparation and management for the season ahead.

Date	Host	Location
Tuesday 5 <sup>th</sup> March	Jared McNair	700 Mathers Rd Yalca

The day will start at 10.00 am for discussion in the paddock and will conclude at 12.00 pm with lunch.

**RSVP ESSENTIAL:** For catering purposes please register your attendance with Murray Dairy  
**P:** (03) 5833 5312
