GOULBURN BROKEN CATCHMENT MANAGEMENT AUTHORITY
BROKEN RIVER - BENALLA
 DECLARATION OF FLOOD LEVELS

NOTES REGARDING DECLARATION OF FLOOD LEVELS

- The flood levels shown on this plan define the surface level of the 1% probability flood, 10% of the water ARI - 1989, for flood management of the Benalla River catchment.
- The derivation of these 1% flood level lines has been based on available hydrologic and hydraulic modelling.
- Areas outside the 1% probability flood level may be inundated by over flood events.
- For the purpose of determining flood levels for locations between flood level lines, the flood level is assumed to vary linearly between flood level lines.
- The flood level lines shown on this plan can be used to assist in the determination of whether a building is likely to be flooded.
- Although there may be buildings within the area covered by the flood level lines, the flood level lines are not intended to determine whether their floors are above or below the 1% flood level.
- The flood levels were declared by the Goulburn Broken Catchment Management Authority under clause 2(3) of the Flood Management Regulations - 1989.
- Although there may be buildings within the area covered by the flood level lines, the flood level lines are not intended to determine whether their floors are above or below the 1% flood level.
- The flood levels were declared by the Goulburn Broken Catchment Management Authority under clause 2(3) of the Flood Management Regulations - 1989.
