

NOTES

This map has been prepared using the best available data, computer modelling and mapping techniques. The accuracy of the map, however, is not absolute and reflects only the accuracy of the data and techniques used. Water Technology Pty Ltd and its subcontractors do not warrant that this map is definitive nor free of error and do not accept liability for any loss caused or arising from reliance upon information provided herein.

The flood level lines shown on this plan define the water surface level of the "1% Probability Flood". This is the flood prescribed by Section 204 of the Water Act - 1989 for floodplain management purposes and has a 1 in 100 chance of being equalled or exceeded in any one year.

The definition of these 1% flood lines has been based on available historical flood level and streamflow information, hydrological and hydraulic modelling.

Areas outside of the 1% probability flood limit may be inundated by rarer flood events.

For the purposes of determining flood levels for locations between the flood level lines, it can be assumed that the flood surface changes at a uniform rate between flood level lines.

The flood level lines shown on this plan can be used to assist in the determination of the designated flood levels in accordance with Clause 6.2 of the Building Regulations - 1994.

Although there may be buildings within the area covered by the flood level lines, it should not be assumed that the floor of any individual building is below the flood level. Buildings should be surveyed to determine whether their floors are above or below the 1% flood level.

Flood levels were declared by the Goulburn Broken Catchment Management Authority on **18 January 2007** under provisions of the Water Act 1989 Section 204.
